Evolution of Aviation Technology

- **1903:** First powered flight.
- **1914-1918:** World War I accelerates aircraft development.
- **1920s-1930s:** Commercial aviation emerges (airlines and passenger flights).
- **1933:** First modern airliner with all-metal construction and retractable landing gear.
- **1939-1945:** World War II Aircraft technology advances rapidly for military purposes.
- **1960s:** Computerized flight control systems and autopilots.
- **1970s-1990s:** Digital avionics, fly-by-wire technology and GPS navigation systems.
- **1990s:** Glass cockpit displays, replacing traditional analog gauges with electronic displays.
- **2000s:** Integration of carbon composites for lighter, more fuel-efficient aircraft.
- **2010s:** Unmanned aerial vehicles (UAVs) and drones for surveillance, cargo delivery and aerial photography.
- **2020s:** Electric and hybrid-electric propulsion systems for greener aviation.

Artificial Intelligence in Aviation

- Artificial Intelligence (AI) offers transformative potential in revolutionizing traditional aviation training frameworks.
- AI can personalize learning experiences, simulate real-world scenarios and ensure the timely dissemination of up-to-date knowledge.
- By leveraging AI-driven training tools, aviation professionals can enhance their understanding and application of complex aviation regulations.

Cyber Security Threats

- Interconnected aviation systems are vulnerable to cyber threats, posing risks to safety & security.
- Cyber-attacks on aviation can have catastrophic consequences, highlighting the importance of robust Cyber Security measures.

The Role of Training Organisations

Building a Strong Foundation in AI & Cyber Security principles

- Understanding algorithms, machine learning and cybersecurity protocols.

Provide Personalized Learning Experiences & Practical Training

- Simulated cyber-attack scenarios and hands-on experience in AI development prepare professionals for real-world challenges.

Adapt to Technology Advancements

- Collaboration with industry partners and regulatory bodies ensures training reflects the latest innovations and best practices.

The Role of Training Organisations

Foster a culture of Vigilance & Accountability

- Promoting awareness and responsibility among aviation professionals regarding AI and Cyber Security.
- Encouraging a culture of continuous learning and improvement to stay ahead of emerging threats.

Conclusion

- Training organisations are instrumental in shaping the future of AI and Cyber Security in civil aviation.
- By prioritizing education, collaboration and vigilance; we can ensure the safety and security of our skies for generations to come.

EASA PART-IS & Cyber Security

- **Part-IS** introduces requirements for the identification and management of information security risks which could affect information and communication technology systems and data used for civil aviation purposes.
- **EASA PART- Information Security (IS) training course** for all that must comply to the new regulation regarding the management of information security risks with a potential impact on aviation safety:
 - <https://jaato.com/courses/1219/easa-part-is/>
- **Aviation Cyber Security training course:** covering the various elements of a cyber attack within the aviation industry, strengthening one's knowledge on cyber and bringing about increased awareness of such threat, creating a cyber-security culture.
